

PatBase Express Enhancements (March 2010)

Search Optimiser

Use the new Search Optimiser to refine your search

Search results from PatBase Express will now be complemented by a new tool – the Search Optimiser – that displays the top companies, technology areas, publication dates and countries within your results set and allows you to narrow your search further by selecting the groups most relevant to your query.

This new feature now appears automatically to the right of your search results offering an accessible and fast way of improving search relevancy.

PatBase Express USA

A new Interface to the US data is now available to all PatBase users. Search the US data in single records, making it easier to restrict the search to different types of publications e.g. search only the text in the Granted US Patents. The database also supports the option to search the record by US serial number.
